DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-14, 28-30 and 34-40, drawn to a semiconductor device, classified in class 257, subclass 411.
- II. Claims 15-27, drawn to process for making semiconductor devices, classified in class 438, subclass 22+.
- III. Claims 31-33, drawn to process for using semiconductor devices, classified in class 365, subclass 185.3+.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, unpatentability of the group I invention would not necessarily imply unpatentability of the method of the group II invention, since the device of the group I invention could be made by processes different from those of the group II invention. For example, instead of forming the drain electrode and the source electrode first, then depositing the channel contacting the drain electrode and the source electrode; forming the channel before forming the source electrode and the drain electrode.

Inventions I and III are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, unpatentability of the group I invention would not necessarily imply unpatentability of the method of the group III invention, since the device of the group I invention could be used in processes of using that different from those of the group III invention. For example, the device could be used as a dummy device to help forming a global planarized dielectric layer above it in semiconductor device, wherein the device would not perform any operation function.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
